Webinar - "A New Era of Future
Solid waste - e-waste menace"

2/12/2021 (Commemoration of National Pollution Control Day)

The webinar on topic 'A New era of future Solid waste - e-waste menace' was organised on 2/12/2021 at 5.00pm. Dr Anand Prem Rajan, Associate Professor (Senior), Dept of Biomedical Sciences, Vellore had delivered a talk on E-waste, the disposal, hazardous effect of e-wastes and how to reuse it and make profit out of e-wastes. Welcome Address was given by Dr. K. Shobana, Assistant Professor of Zoology. As the e-waste is a rich source of metals like gold, silver & copper, it can be recovered and brought back to the production cycle. He also talked about e-waste trading & recycling and the employment provided by recycling alliances. The session was an eye opening because he has given a new dimension for e-wastes and its management. He added, the manufacturer of the product is personally responsible for the final disposal (safe) of the product. The lack of awareness of the consumer can be even results in adverse health effects. We all should be aware of safe handling of e-waste and reducing consumption of electronic products simply for updations in the model. This webinar gave an insight to the students to promote environment friendly e-waste management.

Students and faculty members discussed with Dr. Anand after the session and the webinar ended with a Vote of thanks by Dr. R. Gomathi, Assistant Professor of Botany.

What is E-Waste?

Electrical and Electronic Equipment (EEE) becomes E-waste once it has been discarded by its owner as waste without the intent of reuse. Each product has different material content, is disposed of and recycled in different ways, and is **unequally harmful** to the **environment and human health** if not managed in an environmentally sound manner. (The Global E-waste Monitor, 2020)
