From the Editor's Quill

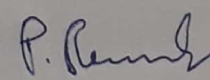

English has become a global necessity, national need and a social requirement. But English in India enjoys a dubious status of being socially wooed and politically thwarted. The modern world is saturated, information updated, and intrinsically networked. Being a digital immigrant, the role of the English teacher, the nature and context of learning as well as the function and relative importance of course content have all been challenged and redefined. New methods, approaches and techniques have emerged battering and assaulting the conventional modes of teaching-learning process. Yet, it seems to be elusive to the grasp of the learners. The dire need of the learners is not on 'form' but on the 'function' of the language. The university students in India, with their highly scholastic achievement do not possess adequate employable skills. As English is the language of the work force, it plays a vital role in deciding the employability quotient. To have an edge over the others in every sector, be it academic, technical and administrative, an excellent standard of teaching methods should be complemented with other skills by teachers. A teacher requires constant updating of skills and ongoing reflection of current learning theories. Hence a teacher needs to be a co-learner rather than a facilitator.

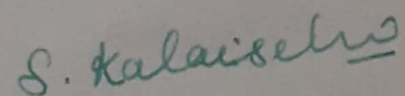

The focus of the seminar is on the dynamic deliberations of progressive approaches to enhance and enliven the teacher and the taught. Hope this academic exercise will really enlighten and enrich the participants to keep themselves abreast of emerging techniques. The latest trends in English language teaching extend a great opportunity to swap their ideas and hone their skills in order to make teaching enjoyable and productive.

The scholarly articles on English language teaching through literature, smart phones, online and web tools have strengthened the gusto and vigour of the seminar. The contributors have explored not only the theoretical aspects of teaching but also the applications on the various innovative methods to be adopted in the classroom. The views expressed and the experiments implemented in the learning environment by the creative and resourceful teaching fraternity bestow fruitful information and encourage the fellow teachers to adopt and execute them in their class rooms. The role of the teacher has been redefined. He or she has to lead the learners to become more creative, problem solvers and effective collaborators.

The seminar aims to instill the spirit of enquiry and research in various facets in the teaching-learning process to equip the participants to gain an insight into the latest requirements of being a teacher in the practical forum. The cry of the ELT community is to have a method by Indians, for Indians and of Indians.

The Editorial Committee offers myriads of thanks to the support received from all quarters.
